

The U.S. Retirement Market, 2009

KEY FINDINGS

- **Total U.S. retirement assets were \$16.0 trillion at year-end 2009, up nearly \$2.0 trillion, or 14 percent, from year-end 2008.** The increase in retirement assets largely was driven by investment returns. Nearly all asset classes experienced positive total returns in 2009.
- **Market performance exerted upward pressure on most retirement plan assets in 2009.** Individual retirement account (IRA) assets rose \$651 billion, or 18 percent; and defined contribution (DC) plan assets rose \$635 billion, or 18 percent. Despite net outflows in 2009, state and local pension plan assets rose \$341 billion, or 14 percent, and private-sector defined benefit (DB) plan assets rose \$191 billion, or 10 percent. Total federal government pension assets, which were primarily invested in nonmarketable government securities, rose 8 percent in 2009.
- **Assets earmarked for retirement are a key component of households' balance sheets.** At year-end 2009, retirement assets represented 35 percent of all U.S. households' financial assets. DC plan accounts were 9 percent of household financial assets and IRA assets were another 9 percent.
- **Employer-sponsored retirement plans play a key role in helping American workers save for retirement.** The bulk (nearly two-thirds) of Americans' retirement assets were held in employer-sponsored retirement plans at year-end 2009. Furthermore, a significant portion of assets held in IRAs originated in employer plans and were then transferred (or "rolled over") into IRAs.
- **DC plan and IRA assets invested in mutual funds constituted one-quarter of Americans' retirement savings at year-end 2009.** More than half of Americans' retirement savings were held in DC plans and IRAs at year-end 2009. Mutual funds managed 51 percent of DC plan assets and 46 percent of IRA assets.

HOW ICI MEASURES U.S. RETIREMENT ASSETS

Given the importance of retirement savings to mutual funds¹ and their investors,² the Investment Company Institute (ICI) publishes statistics on the U.S. retirement market every quarter as an information resource for mutual fund companies, the media,

policymakers, and researchers. ICI combines data from its own mutual fund survey database,^{3,4} and from other trade associations with data from the U.S. Department of Labor and the Federal Reserve Board to estimate both the employer-sponsored retirement plan system's holdings and those of annuities held outside retirement

plans.⁵ Detailed total IRA asset information for 2007 and several earlier years⁶ from the Internal Revenue Service (IRS) Statistics of Income Division round out the picture of the total U.S. retirement market, with ICI estimates of the total IRA market completing the data through 2009.

This report presents detailed information on total retirement assets and mutual fund holdings in retirement accounts. It is organized into two broad sections: (1) narrative and data that highlight recent developments in the U.S. retirement market and (2) an appendix with additional data.

U.S. RETIREMENT MARKET

In addition to relying on Social Security and private savings to prepare for retirement, Americans use a variety of tax-advantaged investments specifically earmarked as retirement savings, including individual retirement accounts (IRAs), employer-sponsored defined contribution (DC) and defined benefit (DB) retirement plans, and annuities. Household survey information finds that 68 percent of all U.S. households had retirement plans through work or IRAs in 2009.⁷

U.S. retirement assets increased by nearly \$2.0 trillion to \$16.0 trillion in 2009, up 14 percent from 2008 (Figures 1 and A1). The change in retirement plan assets reflects market returns, contributions, and withdrawals (e.g., distributions, benefits paid, rollovers). In 2009, market performance exerted upward pressure on most retirement plan assets. Employer-sponsored DC plan assets and IRA assets each increased 18 percent. Despite having net outflows in 2009, private-sector DB plan assets increased 10 percent and state and local government employee retirement plan assets increased 14 percent. Federal retirement plan assets, which are predominantly invested in nonmarketable Treasury securities,⁸ increased 8 percent, while annuity reserves outside of retirement plans increased 4 percent.

FIGURE 1

U.S. RETIREMENT ASSETS

Trillions of dollars, year-end, 1998–2009

¹Annuities include all fixed and variable annuity reserves at life insurance companies less annuities held by IRAs, 403(b) plans, 457 plans, and private pension funds (including 401(k) plans).

²Federal pension plans include U.S. Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust and Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP).

³DC plans include 403(b) plans, 457 plans, and private employer-sponsored DC plans (including 401(k) plans).

In the past, retirement asset growth has been correlated with stock and bond market returns, and 2009 was no exception. Nearly all asset classes experienced positive returns in 2009 (Figure 2). Large capitalization domestic equities experienced positive total returns of 27 percent; small capitalization domestic equities, positive 27 percent; foreign equities,

positive 42 percent; corporate bonds, positive 20 percent; municipal bonds, positive 12 percent; and Treasury inflation-protected securities (TIPS), positive 10 percent. Nominal Treasury securities did not experience positive returns in 2009; nominal Treasury securities had a negative total return of 13 percent over the year.

FIGURE 2

MOST CATEGORIES OF ASSETS EXPERIENCED POSITIVE RETURNS IN 2009

Percentage change in total return index

BOND AND EQUITY INDEXES, 1998–2009

TOTAL RETURN ON VARIOUS ASSET CLASSES IN 2008 and 2009

¹The total return on equities reported is the S&P 500 index, which consists of 500 U.S. stocks chosen for market size, liquidity, and industry group representation.

²The total return on bonds reported is the Citigroup Broad Investment Grade Bond Index, which is a broad U.S. index consisting of Treasuries, agency debt, corporate credit, noncorporate credit, mortgage-backed securities, and asset-backed securities.

³The total return on small-cap equities reported is the Russell 2000 Index, which measures the performance of the 2,000 smallest companies of the Russell 3000 Index.

⁴The total return on foreign equities reported is the MSCI ACWI ex-U.S. Index.

⁵The total return on corporate bonds reported is the Citigroup Corporate 7 to 10 Year Bond Index.

⁶The total return on municipal bonds reported is the S&P National Municipal Bond Index, which is a broad value-weighted index designed to measure the performance of tax-exempt, investment grade U.S. municipal bond markets.

⁷The total return on inflation-linked securities reported is the Citigroup U.S. Treasury Inflation Linked Securities Index.

⁸The total return on government bonds reported is the Citigroup Treasury Government Sponsored 10+ Year Index.

Retirement savings vehicles are integral to Americans' overall retirement planning and preparedness, accounting for more than one-third (35 percent) of the \$45.1 trillion of U.S. household financial assets at year-end 2009 (Figures 3 and A20). The bulk of retirement assets either were held in employer-sponsored retirement plans—including those sponsored by private-sector employers and by federal, state, and local governments—or originated there. Employer-sponsored plans directly held 65 percent of all retirement assets (Figures 1 and A1). In addition, more than half of the assets in IRAs originated as employer-sponsored savings, representing another 14 percent of retirement assets.⁹

The largest components of retirement savings were IRAs and employer-sponsored DC plans, holding \$4.2 trillion and \$4.1 trillion, respectively, at year-end 2009 (Figures 1 and A1). Over the past two decades, retirement savings vehicles that are typically individually directed—DC plans and IRAs—have become a larger portion of U.S. retirement assets. In 2009, DC plans and IRAs made up 52 percent of all retirement assets, up from 39 percent in 1990

(Figure A1). At year-end 2009, private-sector DB pension funds held \$2.1 trillion in assets, state and local government employee retirement plans held \$2.8 trillion in assets, and federal government DB plans and the federal employees' Thrift Savings Plan (TSP) held \$1.3 trillion in assets. In addition, there were \$1.4 trillion in annuity reserves outside of retirement plans at year-end 2009.

In 2009, mutual funds managed \$4.1 trillion, or 25 percent of, U.S. retirement assets, about evenly split between IRAs and employer-sponsored DC plans (Figures A2 and A3). In addition, U.S. households owned another \$884 billion in mutual fund assets through variable life insurance company products—primarily variable annuity contracts—held outside of retirement accounts (Figure A4).¹⁰ Some of these variable annuity (VA) mutual fund assets may be held in variable life insurance policies, which are not counted as part of the U.S. retirement market.¹¹ But, if one were to assume that all of these VA mutual funds are retirement savings, mutual funds' share of the total retirement market would have been 31 percent.

FIGURE 3

RETIREMENT ASSETS REPRESENTED 35 PERCENT OF HOUSEHOLD FINANCIAL ASSETS

Retirement assets as a percentage of household financial assets, year-end, 1979–2009

Sources: Investment Company Institute, Federal Reserve Board, National Association of Government Defined Contribution Administrators, American Council of Life Insurers, and Internal Revenue Service Statistics of Income Division

INDIVIDUAL ACCOUNTS: IRAs AND ANNUITY CONTRACTS

IRAs represented the largest component of the retirement market, with \$4.2 trillion in assets accounting for 26 percent of U.S. retirement market assets at year-end 2009 (Figures 1 and A1). Another \$1.4 trillion, or 9 percent, of retirement assets were investments in annuity contracts—both variable and

fixed annuities—held outside of retirement accounts.¹² Households invest their IRA assets in mutual funds, bank and thrift deposits, annuity contracts, and individual securities (Figure 4). During the bear market in equities from 2000 to 2002, mutual funds' share of IRA holdings dropped to 41 percent at year-end 2002, but rebounded after 2002, registering a 48 percent share at year-end 2007. During the most recent bear

market, mutual funds' share of IRA assets dropped to 43 percent but increased to 46 percent by year-end 2009. In contrast, the share of IRA assets held through bank and thrift deposits fell from 10 percent at year-end 2002 to 7 percent at year-end 2007, increased to 12 percent by March 2009, but decreased to 10 percent by year-end.

All told, 46.1 million, or about four in 10, U.S. households owned IRAs in mid-2009 (Figure 5).¹³ In 2009, approximately 36.6 million, or 31.2 percent of, U.S. households owned **traditional IRAs**—defined as those IRAs first allowed under the Employee Retirement Income Security Act of 1974 (ERISA)—

while approximately 17.0 million, or 14.5 percent of, U.S. households had **Roth IRAs**, first made available in 1998 under the Taxpayer Relief Act of 1997.¹⁴ In 2009, approximately 9.6 million, or 8.2 percent of, U.S. households had employer-sponsored IRAs (SEP IRAs, SAR-SEP IRAs, and SIMPLE IRAs). **The simplified employee pension (SEP) IRA** was created under the Revenue Act of 1978. **The salary reduction (SAR)-SEP IRA** was created under the Tax Reform Act of 1986. The Small Business Job Protection Act of 1996 prohibited the formation of new SAR-SEP IRAs after December 31, 1996, but introduced the **savings incentive match plan for employees (SIMPLE) IRAs**, which were first available in 1997.

FIGURE 5

46 MILLION HOUSEHOLDS OWNED IRAS

May 2009

	Year created	Number of U.S. households with type of IRA, 2009	Percentage of U.S. households with type of IRA, 2009
Traditional IRA	1974 (Employee Retirement Income Security Act)	36.6 million	31.2%
SEP IRA	1978 (Revenue Act)	9.6 million	8.2%
SAR-SEP IRA	1986 (Tax Reform Act)		
SIMPLE IRA	1996 (Small Business Job Protection Act)		
Roth IRA	1997 (Taxpayer Relief Act)	17.0 million	14.5%
Any IRA		46.1 million	39.3%

Note: Households may hold more than one type of IRA.

Sources: Investment Company Institute and U.S. Census Bureau. See "The Role of IRAs in U.S. Households' Saving for Retirement, 2009," Investment Company Institute Fundamentals 19, no. 1, January 2010. Available at www.ici.org/pdf/fm-v19n1.pdf.

Traditional IRA assets were 88 percent of the total \$4.2 trillion in IRAs at year-end 2009 (Figure 6).¹⁵ Traditional IRAs held an estimated \$3.7 trillion in assets at year-end 2009, with 44 percent invested in mutual funds (Figure A10). Roth IRAs held an estimated \$215 billion in 2009 (Figures 6 and A11), with 69 percent held in mutual funds (Figures A10 and A11). Employer-sponsored IRAs (SEP, SAR-SEP, and SIMPLE IRAs) held a total of \$293 billion in assets in 2009 (Figures 6, A12, and A13), with 53 percent invested in mutual funds (Figures A10, A12, and A13).¹⁶

Households have used employer-sponsored plans and accounts to accumulate a sizable portion of the assets they now hold in IRAs. Indeed, SEP, SAR-SEP, and SIMPLE IRAs—despite being labeled “individual accounts” and counted as IRA assets—are, in fact, employer-sponsored savings vehicles. Furthermore, rollovers from 401(k) plans and other employer-sponsored plans are an important source of new funds flowing into traditional IRAs. For example, preliminary 2007 data indicate rollovers totaled \$323 billion, while contributions to traditional IRAs totaled \$14 billion

(Figure 7). Data from the Federal Reserve Board's Survey of Consumer Finances (SCF) indicate that about half of all traditional IRA assets in 2007 were held in

rollover IRAs.¹⁷ Combined, employer-based IRAs and rollover IRAs accounted for more than half of all IRA assets in 2007 (Figure 8).

EMPLOYER-SPONSORED RETIREMENT PLANS

Assets held in employer-sponsored retirement plans represented 65 percent of total U.S. retirement assets in 2009 (Figures 1 and A1). Investors held \$4.1 trillion in DC plans, accounting for 40 percent of employer-sponsored plan assets. Private-sector employer-sponsored DB plans, with \$2.1 trillion, accounted for 21 percent of employer-sponsored plan assets in 2009. In addition, state and local government DB plans held \$2.8 trillion, and federal pension plans held \$1.3 trillion.¹⁸

In 2009, investors held \$2.8 trillion in 401(k) plans, the most common type of DC plan (Figure 9).^{19, 20} Some employers offer their workers other types of DC plans. For example, many educational institutions and certain nonprofit organizations offer 403(b) plans, and state and local governments (and certain tax-exempt organizations) provide 457 plans to their employees. Both 403(b) and 457 plans have features similar to those of 401(k) plans, such as allowing participants to defer current salary and direct the investment allocation of their assets.

Some private-sector employers offer other types of DC plans—such as noncontributory profit-sharing plans—that may not have 401(k) features. Investors held \$1.3 trillion in non-401(k) DC plans in 2009 (Figure 9). At year-end 2009, investors relied on mutual funds to manage \$2.1 trillion in DC plan assets: \$1.5 trillion in

401(k) plans, \$328 billion in 403(b) plans, \$65 billion in 457 plans (Figure 10), and \$193 billion in other DC plans²¹ (Figure A16). Overall, mutual funds managed 55 percent of the assets in 401(k) plans, 48 percent of the assets in 403(b) plans, 38 percent of 457 plan assets, and 40 percent of other DC plan assets

(Figures 10, A16, and A17). Mutual fund shares held in 403(b) plans include both VA mutual fund shares totaling \$180 billion and non-VA mutual fund shares

of \$148 billion; the remaining 52 percent were invested in annuity reserves at life insurance companies (Figure 11).

MUTUAL FUND RETIREMENT INVESTORS FAVOR LONG-TERM FUNDS

Investors primarily held long-term (stock, hybrid, and bond) mutual funds in DC plans and IRAs. In 2009, 58 percent, or \$2.3 trillion, of the \$4.1 trillion of DC plan and IRA mutual fund assets were invested in stock funds (Figures 12, A9, and A15). Hybrid funds (which invest in a mix of equity and fixed-income securities and include most lifestyle and lifecycle funds; Figures 13, A18, and A19) managed \$709 billion in DC plan and IRA assets; bond funds held an additional \$606 billion; and money market funds held \$394 billion (Figures 12, A9, and A15). Most DC plan and IRA long-term mutual fund assets were actively managed funds. At year-end 2009, \$3.3 trillion of long-term mutual fund assets held in DC plans and IRAs were actively managed, compared with \$355 billion invested in passively managed, or index, mutual funds (Figure A6). Investors allocate assets in VA mutual funds held outside of retirement accounts in a similar manner, although with a higher proportion in stock and bond VA mutual funds and a lower proportion in hybrid and money market VA mutual funds (Figure 12).²²

Mutual Fund Assets in DC Plan Accounts. In 2009, \$2.1 trillion, or 51 percent, of employer-sponsored DC plan assets were invested in mutual funds (Figure 9). Sixty percent of those mutual fund assets were equity funds (Figures 12 and A15). Hybrid funds (which invest in a mix of equity and fixed-income securities and include lifecycle and lifestyle mutual funds; Figures 13, A18, and A19) represented 19 percent of DC plan mutual fund holdings in 2009. Another 13 percent of assets were bond funds, and the remaining 8 percent were money market funds (Figures 12 and A15).

Mutual Funds in IRAs. In 2009, \$2.0 trillion, or 46 percent, of IRA assets were invested in mutual funds (Figure 4). Fifty-six percent of those mutual fund assets were equity funds (Figures 12 and A9). Hybrid funds represented 16 percent of IRA mutual fund holdings in 2009. The remaining assets were split between bond funds (17 percent) and money market funds (12 percent). Traditional IRAs hold the bulk of both total IRA assets (Figure 6) and mutual fund assets in IRAs (Figure A10).²³

FIGURE 12

MAJORITY OF MUTUAL FUND RETIREMENT ASSETS INVESTED IN STOCKS

Mutual fund retirement assets by type of fund, billions of dollars, 2009:Q4

	Equity			Hybrid ¹	Bond	Money market	Total
	Total	Domestic	Foreign				
Retirement accounts	\$2,345	\$1,788	\$557	\$709	\$606	\$394	\$4,054
IRAs	1,086	823	263	314	323	230	1,953
DC plans	1,259	965	294	395	283	165	2,102
401(k) plans	890	661	230	319	198	108	1,515
403(b) plans	231	200	31	42	32	23	328
457 plans	41	33	8	11	11	2	65
Other DC plans ²	97	72	25	22	42	31	193
VA mutual funds (outside of retirement accounts)³	581	451	130	67	196	40	884
Total	2,926	2,238	687	776	802	435	4,938

¹ Hybrid funds invest in a mix of equities and fixed-income securities. The bulk of lifecycle and lifestyle mutual funds are counted in this category.

² This category includes Keoghs and other DC plans (profit sharing, thrift-savings, stock bonus, and money purchase) without 401(k) features.

³ Some of the VA mutual fund assets may be assets held in variable life insurance policies, which are not counted as part of the U.S. retirement market. ICI is not able to separately identify the portion of VA mutual fund assets contained in these policies.

Note: Components may not add to the totals because of rounding.

Source: Investment Company Institute

Net New Cash Flow to Mutual Funds from Retirement Accounts. Using retirement account holdings information and fund-specific cash-flow information and implied rates of return, ICI estimates net new cash flow into mutual funds from retirement accounts.²⁴ Net new cash flow into mutual funds from IRAs and DC plans both picked up in 2009 compared with 2008, though still not back to pace seen in 2007 and earlier (Figures A7 and A8). Long-term mutual funds held in retirement accounts experienced positive net new cash flow in 2009, with \$110 billion in net inflows, compared to \$77 billion in net outflows in 2008. Although retirement account outflows from equity funds were \$25 billion in 2009, both bond funds and hybrid funds experienced net inflows into retirement accounts (Figure A8). Bond funds had inflows of \$93 billion, compared with net inflows of \$31 billion in 2008. Flows into hybrid funds were \$41 billion in 2009, compared with net inflows of \$28 billion in 2008.²⁵ Retirement account flows into money funds turned negative for the first time since 2004, with \$62 billion of net outflows in 2009.

ASSETS IN LIFECYCLE AND LIFESTYLE MUTUAL FUNDS

Lifecycle (or target date) and lifestyle (or target risk) mutual funds have grown in popularity among investors and retirement plan sponsors in recent years. Lifecycle investment options (including lifecycle mutual funds), in particular, have been increasingly offered in the investment lineup of plan sponsors and held in the accounts of recently hired 401(k) plan investors.²⁶

Eighty-four percent of the assets of lifecycle mutual funds were held in retirement accounts at year-end 2009 (Figures 13 and A18).²⁷ A lifecycle fund pursues a long-term investment strategy, using a mix of asset classes, or asset allocation, that the fund provider adjusts to become more conservative over time. The asset allocation path that the lifecycle fund follows to become more conservative over time is typically referred to as the “glide path.” Since discussions of asset allocation usually focus on the percentage of the portfolio invested in equities, the glide path generally reflects the declining percentage of equities in the portfolio as it approaches and passes the target date, which is usually indicated in the fund’s name. The target date generally is the date at which the typical investor for whom that fund is designed would reach retirement age and stop making new investments in the fund.

Forty-five percent of lifestyle mutual fund assets were held in retirement accounts (Figures 13 and A19). These funds maintain a predetermined risk level and generally use words such as “conservative,” “moderate,” or “aggressive” in their names to indicate the fund’s risk level.

FIGURE 13

LIFECYCLE AND LIFESTYLE MUTUAL FUND ASSETS

Billions of dollars, year-end, 2001–2009

- Other investors
- IRAs
- Employer-sponsored DC plans

LIFECYCLE MUTUAL FUNDS¹

LIFESTYLE MUTUAL FUNDS²

¹A lifecycle mutual fund typically rebalances to an increasingly conservative portfolio as it approaches and passes the target date of the fund, which is usually included in the fund's name.

²A lifestyle mutual fund maintains a predetermined risk level and generally contains "conservative," "aggressive," or "moderate" in the fund's name.

Note: Components may not add to the total because of rounding.

ADDITIONAL READING

"The Evolving Role of IRAs in U.S. Retirement Planning," *Investment Company Institute Perspective*. This report describes how the evolution of employer-sponsored retirement plans has elevated the importance of IRAs for many U.S. households and highlights the significant role that IRAs play in retirement and retirement planning. Available at www.ici.org/pdf/per15-03.pdf.

"The Role of IRAs in U.S. Households' Saving for Retirement, 2009," *Investment Company Institute Fundamentals*. This study reports information from two ICI household surveys, the 2009 IRA Owners Survey and the 2009 ICI Mutual Fund Shareholder Tracking Survey. Available at www.ici.org/pdf/fm-v19n1.pdf.

NOTES

- ¹ IRAs and employer-sponsored DC plan accounts held 36 percent of the \$11.1 trillion in mutual fund assets in the United States at year-end 2009 (Figures A5 and A21). Retirement savings accounts hold a significant share of long-term mutual fund assets (47 percent), but are a relatively minor component of money market fund assets (12 percent).
- ² Ninety-four percent of mutual fund shareholders indicate that saving for retirement is one of their financial goals and 76 percent indicate that it is their primary financial goal. See Schrass and Bass 2010 and Sabelhaus, Bogdan, and Bass 2009.
- ³ This is based on data from ICI's Quarterly Questionnaire for Retirement Statistics, which gathered data from 18,786 mutual fund share classes representing approximately 84 percent of mutual fund industry assets at year-end 2009. Assets were estimated for all nonreporting funds. Data reflect revisions to previously reported data. Estimates of retirement assets in broker street name and omnibus accounts were derived from data reported on the Annual Questionnaire for Classification of Shareholder Assets.
- ⁴ In this report, estimates of mutual fund assets in DB plans have been excluded because of incomplete reporting. Federal Reserve Board data indicate that mutual fund assets held in private-sector DB plans accounted for \$286 billion at year-end 2009, or less than 2 percent of the U.S. retirement market. In addition, the Federal Reserve Board reports that state and local government (DB) employee retirement funds held \$247 billion in mutual fund assets at year-end 2009, or less than 2 percent of the U.S. retirement market. See Federal Reserve Board 2010.
- ⁵ ICI reports a lower annuities total than the Flow of Funds Accounts (see Federal Reserve Board 2010) because annuities held in IRAs, 457 plans, and 403(b) plans are netted from the Flow of Funds Accounts annuities (life insurance pension fund reserves) figure and reported in their respective categories by ICI.
- ⁶ Total IRA market assets are derived from tabulations of total IRA assets provided by the IRS Statistics of Income (SOI) Division for tax years 1989, 1993, 1996–2002, and 2004; with preliminary data provided for 2006 and 2007. These tabulations are based on a sample of IRS returns. For a description of the SOI estimation techniques, see Sailer, Weber, and Gurka 2003; Sailer and Nutter 2004; Bryant and Sailer 2006; and Bryant 2008.
- ⁷ In 2009, 39 percent of U.S. households owned IRAs, 60 percent of U.S. households had employer-sponsored plan coverage (DC plan balances, current DB plan payments, or expected future DB plan payments), and 31 percent had both IRAs and employer-sponsored plan coverage. See Holden and Schrass 2010a.
- ⁸ Federal pension plans include U.S. Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust and the Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP). Although the TSP is similar to a 401(k) plan, assets held by the TSP are included in federal government retirement assets and are not included in the DC plan total. At year-end 2009, the TSP held \$244 billion in assets. For more details regarding the TSP, see Clifton Gunderson LLP 2010.
- ⁹ Derivation of this estimate is based on information from the Federal Reserve Board's Survey of Consumer Finances (SCF) and is explained in more detail in endnote 17 (see Figure 8, as well). See Federal Reserve Board 2009. For the article summarizing the 2007 SCF, see Bucks, Kennickell, Mach, and Moore 2009.
- ¹⁰ All told, through taxable, tax-deferred, and tax-exempt accounts, households held 86 percent of the \$11.1 trillion in mutual fund assets at year-end 2009. See Investment Company Institute 2010.
- ¹¹ These mutual funds are commonly referred to as variable annuity (VA) mutual funds. However, some of the VA mutual fund assets backing variable products at life insurance companies may be held in variable life insurance policies, which are not counted as part of the U.S. retirement market. ICI is unable to separately identify the type of variable product in which VA mutual funds shares are held. Estimates from Federal Reserve Board staff, based on tabulation of 2005 A.M. Best data, are that approximately 15 percent of assets in life insurance company separate accounts (the accounts that back variable products at life insurance companies) were in variable life policies.
- ¹² See endnotes 5 and 11.
- ¹³ For additional discussion of IRA-owning households, see Holden and Schrass 2010a and 2010b.
- ¹⁴ For a history of IRAs, see Holden, Ireland, Leonard-Chambers, and Bogdan 2005. For a discussion of the changing role of IRAs in retirement planning, see Sabelhaus and Schrass 2009.

¹⁵ See endnote 6.

¹⁶ The relatively new SIMPLE IRA, which is designed for firms with 100 or fewer employees, has experienced steady growth in number of plans and participants since its introduction in 1998 (Figure A14). Figure A14 is based on semiannual surveys of 24 ICI member firms that held about three-quarters of the SIMPLE IRA assets invested in mutual funds at year-end 2008.

¹⁷ See Federal Reserve Board 2009. The SCF added a new series of questions to their survey to ascertain the type of IRA assets held by households (beginning with the 2001 survey) and the amount of assets in each type of IRA (beginning with the 2004 survey). The SCF asks respondents to identify the type(s) of (non-employer-sponsored) IRAs that they own: Roth, rollover, regular or other, or Keogh. It then asks for the value of each type of account. To estimate the percentage of traditional IRAs that are rollover IRAs, ICI used the ratio from the SCF of “roll-over” IRAs to the sum of “roll-over” and “regular or other” IRAs. The accuracy of this estimate will depend on the extent to which SCF respondents properly characterized and allocated their IRA assets among the types of IRAs.

¹⁸ See endnote 8.

¹⁹ Assets in 401(k) plans refer to private-sector DC plans with 401(k) features (e.g., salary deferral feature). However, 401(k) plan assets reported for mutual funds and the 401(k) market may include some DC plan assets purchased in the plans prior to the addition of 401(k) features. Total 401(k) asset data through 2007 are from the U.S. Department of Labor’s tabulations of the Form 5500 data (see U.S. Department of Labor 2009 and 2010). Data after 2007 are estimated by ICI. For a history of 401(k) plans, see Holden, Hadley, and Brady 2006.

²⁰ Prior to 2005, the U.S. Department of Labor private pension plan bulletin updates reported a count of active 401(k) plan participants that had been adjusted from the number of active participants that was actually reported in the Form 5500 filings to exclude: (1) individuals eligible to participate in a 401(k) plan who had not elected to have their employers make contributions; and (2) non-vested former employees who had not (at the time the Form 5500s were submitted) incurred the break in service period established by their plan (see U.S. Department of Labor Employee Benefits Security Administration 2010 for further detail). This change in methodology results in a dramatic increase in the number of individuals reported as active participants in 401(k) plans: in 2004, the number of active participants increased to 53.1 million (new method) from 44.4 million (old method;

see U.S. Department of Labor Employee Benefits Security Administration 2010). As the Department of Labor notes: “In a purely economic sense and for research purposes, individuals in these groups should not be included in the count of active participants.” However, the form schedule needed to make the adjustment is no longer required. Adjusting the Form 5500 data, ICI estimates there were 49.8 million active 401(k) participants in 2007.

²¹ Other DC plans—which include DC plans without 401(k) features and some Keoghs—held \$483 billion in assets in 2009 (Figure A17). Keogh plans (also known as H.R. 10 plans) cover self-employed individuals, partners, and owners of unincorporated business. Created by Congress in 1962, these plans were at one time governed by their own set of rules. However, over time, subsequent legislation eliminated differences between Keoghs and other types of pension plans. They are now designated as a specific type of pension plan—e.g., profit-sharing Keogh, 401(k) Keogh—and governed by the rules of such plans.

²² See Appendix Figure A4 for total VA mutual fund assets.

²³ Education IRAs—created under the Taxpayer Relief Act of 1997 and renamed Coverdell education savings accounts (ESAs) in July 2001—are not included in the total IRA assets. Mutual fund holdings in Education IRAs were \$5 billion in 2009 (Figure A10).

²⁴ ICI does not collect sales or net new cash flow information for retirement plans on its Quarterly Questionnaire for Retirement Statistics. Net new cash flow is sales of shares (other than reinvested distributions) less redemptions plus net exchanges. Net new cash flow was estimated by assuming that retirement assets within an individual fund share class had the same investment performance as the entire mutual fund. Investment performance for each mutual fund was calculated by taking the total change in assets and adjusting for total net new cash flow during the time period (estimated annually through 2006; estimated quarterly since 2007:Q1).

Retirement assets were adjusted by investment performance. The residual change in assets was attributable to net new cash flow. The formula for the flow calculation is:

$$RF_t = \frac{TF_t(RA_{t-1} + RA_t) + 2(RA_t)(TA_{t-1}) - 2(TA_t)(RA_{t-1})}{(TA_t + TA_{t-1})}$$

For a given mutual fund, RF represents retirement net new cash flow, TA represents total assets, TF represents total net new cash flow, and RA represents retirement assets.

²⁵ Retirement flows to funds of funds are counted in the investment objective of the funds of funds. Industry flows to funds of funds are counted in the investment objective of the underlying funds. The bulk of lifecycle and lifestyle fund flows were included in the hybrid category in the retirement flow estimates, but would be counted in the underlying funds' flows in the industry data (Figure A8).

²⁶ See Holden, VanDerhei, and Alonso 2009 for lifecycle investment option offering and use among 401(k) plans and plan participants at year-end 2008. For example, at year-end 2008, three-quarters of plans in the EBRI/ICI 401(k) database had lifecycle investment options in their plan lineups; 31 percent of the 24.0 million 401(k) participants in the EBRI/ICI database held lifecycle investments, and lifecycle investments represented 6.6 percent of the EBRI/ICI 401(k) database assets.

²⁷ Often, lifecycle and lifestyle funds are organized as funds of funds, with their underlying portfolios typically invested in other funds managed by the fund sponsor. These funds of funds are included in the asset totals.

¹DC plans include 403(b) plans, 457 plans, and private employer-sponsored DC plans (including 401(k) plans).

²Federal pension plans include U.S. Treasury security holdings of the civil service retirement and disability fund, the military retirement fund, the judicial retirement funds, the Railroad Retirement Board, and the foreign service retirement and disability fund. These plans also include securities held in the National Railroad Retirement Investment Trust and Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP).

³Annuities include all fixed and variable annuity reserves at life insurance companies less annuities held by IRAs, 403(b) plans, 457 plans, and private pension funds. Some of these annuity reserves represent assets of individuals held outside retirement plan arrangements and IRAs; however, information to separate out such reserves is not available.

^eData are estimated.

^PData are preliminary.

Note: Components may not add to the total because of rounding.

FIGURE A3

MUTUAL FUNDS' SHARE OF U.S. RETIREMENT ASSETS^{1,2}

Percentage, end-of-period, 1998–2008, 2009:Q1–2009:Q4

¹U.S. retirement assets include IRAs, annuities, and employer-sponsored DB and DC pension plans. Pension plans are sponsored by employers such as businesses; federal, state, and local governments; and nonprofit organizations.

²Mutual fund retirement assets exclude DB plans' mutual fund holdings, which amounted to about 2 percent of the U.S. retirement market at the end of the fourth quarter of 2009. VA mutual fund assets held outside of retirement accounts also are excluded. Included are mutual fund assets held by IRAs and employer-sponsored DC plans.

¹Index mutual funds are equity, bond, and hybrid funds that target specific market indexes with the general objective of meeting the performance of that index. Equity index funds are the most common type of index funds, accounting for 81 percent of the \$837 billion of index fund assets at the end of the fourth quarter of 2009.

²Share is the percentage of total index mutual fund assets.

Note: Components may not add to the total because of rounding.

¹See endnote 24 for an explanation of the procedure used to estimate net new cash flows to mutual funds from retirement accounts.

²Retirement flows to funds of funds are counted in the investment objective of the funds of funds. Industry flows to funds of funds are counted in the investment objectives of the underlying funds.

³Hybrid funds invest in a mix of equities and fixed-income securities.

⁴The bulk of lifecycle and lifestyle mutual funds are counted in this category.

(*) = between \$500 million and -\$500 million

Note: Components may not add to the total because of rounding.

¹A lifestyle mutual fund maintains a predetermined risk level and generally contains “conservative,” “aggressive,” or “moderate” in the fund’s name.

²Share is the percentage of total assets.

Note: Components may not add to the total because of rounding.
